Packaged Literature Search 78-5 Oceanic Bibliographies

Washington, D.C.
May 1978

JUL 6 1978

U.S. DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
Environmental Data Service

This packaged literature search was generated completely by computerized retrieval. It contains citations from the Oceanic Abstracts data base for the period 1964 through about December, 1977. Citations are arranged by descending citation number. This generally means that citations to the most recently published articles are listed first.

Abstracts for each article are available in the publication OCEANIC ABSTRACTS, which is published by Pollution Abstracts, Inc., 620 S. Fifth St., Louisville, KY 40202. Abstracts are included in this packaged search only for the year 1967, since at this time the computer-searchable file does not contain abstracts for other years.

Questions or comments regarding this packaged literature search should be referred to User Services Branch, D822, Library and Information Services Division, National Oceanic and Atmospheric Administration, NOAA, Rockville, MD 20852, Telephone 301-443-8330.

Customized literature searches are available on request.

INTRODUCTION

This packaged search has been generated by instructing the computer to print all citations to bibliographies. A KWOC-type permuted index is provided.

Another key to oceanic bibliographies, as well as many other subject areas is the standard reference, Biblio graphic Index, available at the Library and Information Services Division, WSC-4, Rockville, Md.

HOW TO USE THIS INDEX

Uncontrolled terms have been assigned to the citations listed. Terms are listed alphabetically in this computer-generated Index, and beneath each term appears, indented, the accession number(s) of the citation(s) so indexed, together with all the other terms assigned, the latter appearing to the right of the colon (:). In a few cases compound terms have been hyphenated, e.g., Trace-elements, but for the most part single words are used. A few words have not been permuted. Accession numbers are listed in random order under their headings, a property of the program. The citations themselves are listed in descending accession number order, which corresponds approximately to a newest-first, oldest-last chronology.
